

iQ.Suite Convert

Features

- Removal of malicious macros from Office files
- Conversion of email attachments to PDF or PDF/A
- Removal of hidden information, for example histories
- Centralised ZIP compression of email attachments
- Rule-based management
- Automated processes

Ward off ransomware Trojans Convert email attachments

Email attachments under control

Looking to fight off Trojans in email attachments? Planning to convert Office documents to PDF format? Or are you interested in taking the pressure off your infrastructure by automatically compressing file attachments? Then iQ.Suite Convert is exactly what you need.

iQ.Suite Convert supports not only the conversion of email attachments into PDF or ZIP format, it also enables the removal of malicious code from Office files.

Reliable protection from encryption Trojans

Hackers increasingly misuse Office documents to spread hidden Trojans in macros. If a malicious code reaches the target system, data is encrypted and significant ransom sums are demanded from unsuspecting users.

Now, thanks to iQ.Suite Convert, it's possible to stop ransomware Trojans such as Locky and TeslaCrypt in their tracks. Two simple scenarios give you the security you need:

1 Suspicious Office documents are identified in interplay with iQ.Suite Watchdog. Subsequently, iQ.Suite Convert removes the potentially dangerous macros and delivers the cleaned file to the recipient. At a later point in time, the recipient can optionally request delivery of the original file.

2 Alternatively, emails containing potentially dangerous Office documents can be stopped and converted to PDF format with iQ.Suite Convert. The recipient receives the original attachment as a PDF file. And an active malicious code no longer poses a threat. »

iQ.Suite Convert

Comprehensive protection against Trojans in Office documents

Benefits

- Protection against ransomware and encryption Trojans
- Improved data security for email correspondence
- Processing of documents can be prohibited
- Reduced size of email attachments
- Relief of infrastructure
- No installation at work place necessary

About GBS

GROUP Business Software is a leading provider of solutions and services for the IBM and Microsoft collaboration platform.

More than 5,000 customers and 4 million users worldwide trust in the expertise of GBS.

» An additional virus scan can be conducted on the original email attachment with the antivirus solution iQ.Suite Watchdog at a later time. If the file is classified as not dangerous, it is delivered in the original format. Whatever your decision, with iQ.Suite Convert you'll be well-armed to battle off Trojans in Office documents.

More convenience with PDF

Often, it makes good sense not to send original email attachments. PDF is a smart alternative when removing histories from Office documents or standardising file formats. iQ.Suite Convert takes on the task: Whether it be Office documents or graphics, nearly every format can be converted and sent as a PDF file. And you decide, based on file size or format, for example, which attachments are converted.

The central PDF conversion also makes it possible to prohibit file changes. One more thing: iQ.Suite Convert can convert files to PDF/A, the recognised format for archiving purposes.

Increased performance with file compression

Whether sending or receiving, the transfer of email attachments, especially large files, places a burden on the network infrastructure, using up valuable storage capacity. With iQ.Suite Convert, this loss of performance becomes a thing of the past! Using flexible rules, email attachments are compressed centrally on the server and converted to ZIP format. You'll profit from smaller mailboxes and improved performance of your email infrastructure.
