iQ.Suite aaS

For years, GBS iQ.Suite has been one of the leading Enterprise Email Management platforms that provides one of the most comprehensive sets of security features and capabilities on the market. It covers both Domino and Exchange and integrates seamlessly with any other email solution through SMTP.

As more and more companies are moving the email service to Cloud, and especially to Office 365. GBS introduced iQ.Suite as a Service – a cloud-based security service that provides the necessary enterprise-class security to customers who are moving to O365 or are already there.

Although O365 has some great security mechanisms and policies, they are rarely flexible and customizable enough for most mid-sized and enterprise companies to apply and enforce their own policies, processes and security controls. With iQ.Suite as a Service, we provide companies with the opportunity to adopt a holistic email security platform without any compromise, and at the same time to regain the control which the Cloud is restricting.

„iQ.Suite as a Service" brings unique and powerful functionality from the on-premises world to on-cloud customers and allows them to quickly and cost-effectively enjoy the same benefits, security, visibility and control. Simply connect your Office 365 tenant to our service within minutes.

The Highlights

» **Detect Insider Threat**
we are checking not only incoming and outgoing communication, but also internal one, to ensure that you are well covered

» **Retro-Active Scanning**
scan not only data in-motion, but also data at rest (e.g. mails in the inbox). with our retro-active scanning, which allows you to scan your mailboxes with the latest possible malware definitions.

» **Wrong Recipient Protection**
the combination of our content recognition capabilities and unique encryption methodology ensures that you never again send critical data to the wrong recipient by accident

» **Content-Driven Encryption**
encrypt your email communication based on the data it contains, its recipient, and/or at the sender's initiative

» **Active-Content Removal**
remove active content from attachments to prevent that even trusted and whitelisted domains from being used to harm your users and organization

» **Dynamic Email Signature**
ensure emails from your organization are amended by the proper contact details and legal disclaimers, but also be able to manage them dynamically and centrally in order to support campaign-driven initiatives

» **Real out-of-office management**
don't let unpredicted absence risk your business relationship and enable out-of-office flow and notifications, even retro-actively

» **Business Email Compromise**
Combine intelligent content-driven security with rules and internal processes to protect your organization from the growing threat of BEC.
