

XPages Migration

IBM Notes and Domino is the most prolific collaboration platform in the world, with more than 18 million custom collaboration applications built on it since the early 1990s. Many of these Notes based business applications have become mission critical to the organizations running them. Also, for various reasons, these applications have not kept up with evolving business needs and user expectations.

If you have plans to migrate your Notes Client applications, GBS XPages Migration Experts can help deliver modernized, usable and highly scalable applications on demand. What's more, we help you get there cheaper, faster and with fewer resources!

We ensure that you achieve the following strategic and project goals:

- Reduced dependencies on the Notes Client
- Access to applications via the web and mobile devices
- Updated functionality to eliminate gaps between business needs and application
- Enhanced user interface and a Web 2.0 user experience
- Minimal business disruption for users
- Low risk and predictable outcomes
- Affordable cost
- Realistic time frame

Understanding
Domino
Environments

Mobility

Optimization &
Consolidation

Infrastructure
Management

Email Management
& Security

Critical activities include:

- Identifying and documenting detailed use cases and business processes for each target application
- Defining test plans to test and validate use cases and adherence to business processes
- Setting up development and test environments with test data extracted from production applications
- Defining XPages Frameworks to centralize and align the user experience across all applications
- Rapidly migrating applications leveraging GBS' proprietary acceleration tool - GBS Xcelerator
- Optimizing applications to meet current business needs
- Testing using validated staging and testing environments
