

iQ.Suite Connect

Combining email communication
with social business platforms

Connecting Smartly

Modern social business and collaboration solutions are becoming increasingly popular in the corporate world. These solutions drive the transfer of knowledge among employees, leading to an increased focus on internal networking in order to encourage teamwork, leverage know-how and increase productivity.

Until now, there have been only limited opportunities available for the integration of email communication into appropriate collaboration platforms. Yet with iQ.Suite Connect, GBS can now offer the ideal solution. Part of the iQ.Suite email management platform, this tool is responsible for integration into the leading social business platforms: Microsoft SharePoint and IBM Connections.

Increasing Productivity

Using iQ.Suite Connect, you will be able to store email attachments via iQ.Suite in social business platforms for the very first time. Flexible automated classification principles ensure that the attachments of business-related emails are only saved in Microsoft SharePoint and IBM Connections. iQ.Suite Connect automatically removes file attachments from emails and transfers these to a central storage location within the social business system. The attachments are then replaced by links displayed in these emails, which enable users to access the files.

By removing attachments, you avoid unnecessarily saving files, simultaneously reducing the load on the email server. With iQ.Suite Connect2SharePoint and Connect2Connections, integration with Microsoft SharePoint and IBM Connections is now available, in Microsoft Exchange/SMTP as well as in IBM Domino.

Storing Virus-free Email Attachments

In addition, the combination with iQ.Suite's powerful protection mechanisms guarantees that only virus-free and spam-free attachments are stored.

Features

- Centralized storage of email attachments in Microsoft SharePoint and IBM Connections
- Automated processes with smart classification of business-related content
- Flexible storage management guidelines
- File attachments are replaced by links/references
- In combination with iQ.Suite Watchdog and Wall, only virusfree attachments are stored

Benefits

- Centralized storage in social business systems saves time and costs
- Improved employee productivity
- Added value through the combination of email and social business
- Automated processes
- Reduced server load when sending large file attachments
