iQ.Suite WebCrypt Pro

Features

- Web-based access via any browser
- Simple coupling with IBM Domino and Microsoft Exchange/SMTP
- Central management
- Optional integration with virus and spam protection
- Solution is available on-premise or SaaS

Secure Email Exchange with all Communication Partners

Protecting Knowledge, Securing Communication

The increased number of cyber attacks means increased danger for confidential data. More and more frequently, crucial data is being intercepted and subsequently manipulated or abused. The only sure answer is trustworthy, reliable encryption!

Encryption – Keep it simple

iQ.Suite WebCrypt Pro is a secure, yet simple solution developed by GBS to secure email communication with your customers and business partners centrally. As a complement to iQ.Suite Crypt Pro, it can be quickly and seamlessly integrated into your network and facilitates the immediate exchange of encrypted emails. The installation of additional hard- or software elements on part of your communication partners is not needed.

The process is quite simple: Send your encrypted email as usual. Your communication partner receives a regular email with the encrypted correspondence as an attachment. By clicking on the attachment, the recipient is directed via protected connection to the WebCrypt Pro portal. The recipient logs in, reads the message and can respond securely. File attachments can be saved locally.

The actual contents remain in the possession of the recipient of the encrypted email and are not stored on the WebCrypt server permanently. You are thus no longer required to store emails.

iQ.Suite WebCrypt Pro

Email Encryption for Everyone

Benefits

- Improved data protection
- No installation required by recipient
- Safe B2B and B2C emails
- Scalable, flexible architecture
- Fast and seamless integration
- Supports mobile devices

Email Encryption as a Service

WebCrypt Live is also the right solution for you, if you value a simple and resource-efficient operation. Instead of deploying it in your own infrastructure, you can use email encryption as Software as a Service. An external data center guarantees reliable and safe operation. Thanks to modern mechanisms, WebCrypt Live can be deployed immediately and is available to corporations in no time.

In this context, both the access to our solution and the maintenance of the data receives optimum protection. For you, this results in the compliance with highest security standards and optimal safeguarding against failures. Nothing is more important to us than securing your valuable data.

Growing with the Challenge

If you choose WebCrypt Live today, you will also create space for high levels of flexibility. Our solution grows with your needs. Thus, you are quickly able to expand WebCrypt Live's capacity at an external data center, in case your email volume increases. This allows for the detection of peak loads when encrypted emails are sent. Trust in safe and flexible email encryption as a service and take advantage of a high-performing, resilient encryption platform.

About GBS

GBS is a leading provider of solutions and services for the Microsoft and IBM collaboration platform.

More than 5,000 customers and 4 million users worldwide trust in the expertise of GBS.
